

**HOME
UNDER
CONDITIONS
OF
UNCERTAINTY**

**How are the meaning
and function of home
being
reconfigured
under conditions of
instability and
long-term uncertainty?**

Home no longer operates primarily as a stable place but as a negotiated system. Practices of (anti-)curation of domestic space function as key mediators through which inhabitants produce belonging, agency, and meaning despite structural precarity.

Impermanence of the home

Homes will become smaller and modular and portable. Building materials are reused and recycled.

Anti-Curation as Resistance

Deliberate indeterminacy, refusal of optimisation, and non-curation can operate as counter-practices that challenge extractive and commodified housing logics.

Eco-Tech Revolution

Climate change will alter the shape of the home. Tech will make home and communities healthier and more efficient.

Curation as Adaptive Practice

Home will be a space for creative self exploration. Everyday domestic curation acts as an adaptive strategy through which individuals cope with instability, mobility, and loss of long-term security.

Algorithmic Standardisation

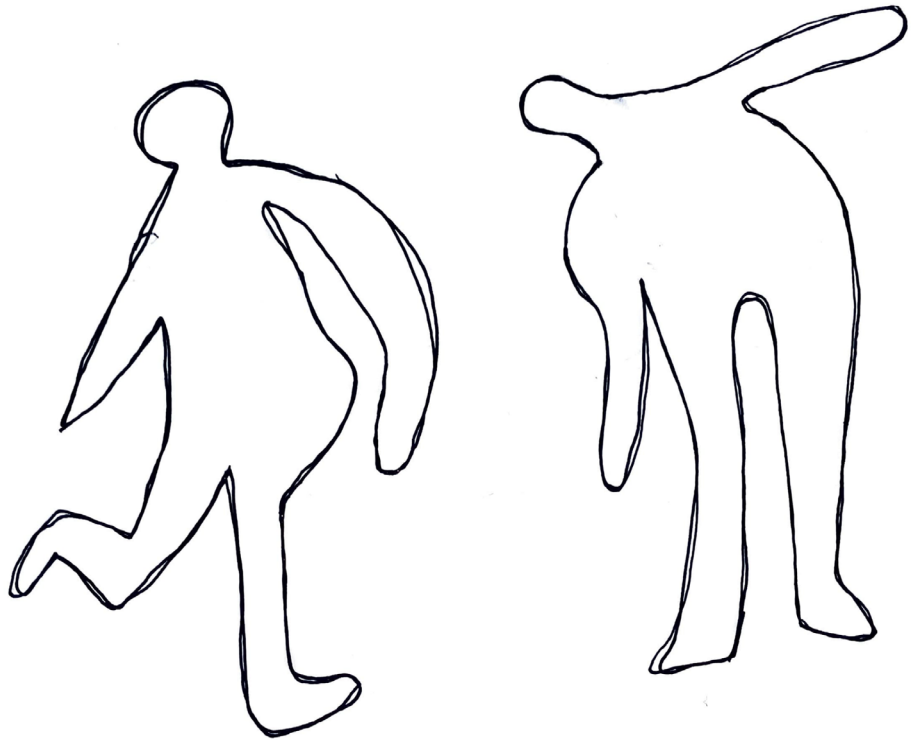

Digital platforms and algorithmic systems increasingly shape domestic imaginaries, reinforcing standardised notions of home while simulating personalisation. The Metaverse becomes home.

Change in lifestyles and social wellbeing

Community will become an extension of family as more spaces are designed for shared living.
